EFTPOS

Automating the payment process

The EFTPOS module has been designed to integrate the Mandalay CS Ticketing module with EFTPOS terminals via a third-party product called Linkly (PC-EFTPOS).

This will allow ticket price information to pass automatically from Mandalay CS Ticketing to an integrated EFTPOS terminal and pass back the payment to the Ticketing transaction record.

What are the benefits of integrating with EFTPOS?

✓ By **automating the EFTPOS payment process**, the time it takes an operator to complete a transaction is significantly reduced.

✓ Automation **reduces the possibility of keying errors** as operators aren't required to manually enter transaction amounts into EFTPOS terminals.

✓ Transaction payment methods are tracked and **auditable**.

What does the process look like?

The Gatehouse Operator processes a transaction in Mandalay CS Ticketing and selects the 'EFTPOS' payment type.

The transaction amount is transmitted to the EFTPOS terminal.

The Gatehouse Operator or customer processes the payment using the customer's debit/credit card.

On payment confirmation, payment information is transmitted back to Mandalay CS Ticketing where the transaction is completed.
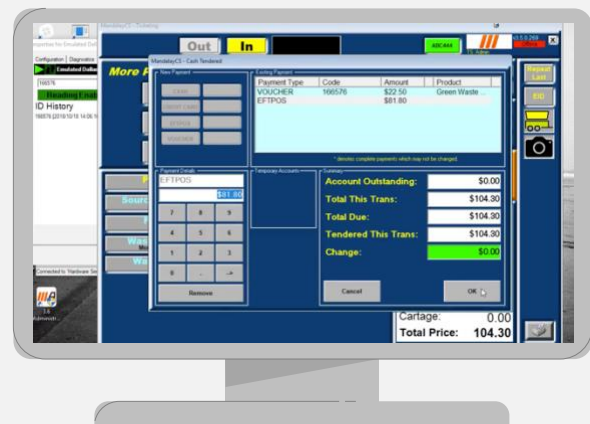

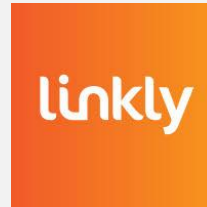

A receipt is generated.

Linkly (PC-EFTPOS)

Linkly (PC-EFTPOS) is a third-party software product that integrates directly to EFTPOS terminals.

The Mandalay CS Ticketing module integrates with the Linkly (PC-EFTPOS) software using an Active X component provided by Linkly (PC-EFTPOS) and embedded within the Ticketing module.
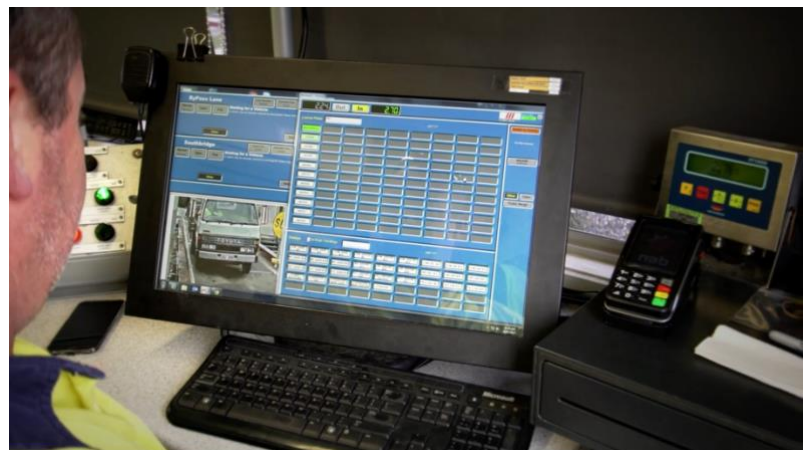

The Ticketing module will only allow the integration to work if it detects the Linkly (PC-EFTPOS) software is running and that a terminal is online at the time Ticketing starts.

What is required?

The EFTPOS module will require installation of PC-EFTPOS software on local PCs. Your bank will need to coordinate this installation and provide an integrated EFTPOS terminal.

Mandalay will enable the module within your Mandalay CS subscription and the EFTPOS Payment Type will be configured.
